

CONSTRUCTION DATA SOLUTIONS

The workflow of successful timecard integration

Save \$1,600 per project with modernized Digital timecard integration

More and more, construction companies are relying on the use of digital timecards and payroll services. There is a multitude of reasons for this—the digital approach is a proven way to smoothly integrate and improve interoperability, allowing for a seamless stream of data between systems. Additionally, digital applications alleviate the burden of paper overload, outdated manual entry, and lack of insight—that is, knowing how many hours, overtime, allowed time vs. overtime, human error, and more.

The most disputed part of any timecard and payroll management scenario is that the processes often involve out-of-date technology—too many legacy systems, leaving data siloed and not easily accessible through modern technology. Previously, data had to flow through multiple systems before it was available for analytics and business insight. This multi-step process was inefficient, resulted in record-keeping discrepancies, and placed a burden upon resources that would be better allocated to more pressing business matters.

Lack of insight into payroll data is costing companies millions of dollars annually in wasted time, money, and resources, as a result of the following:

Labor inaccuracy reports

Forgetful employees

Errors from manual data entry

Workflow Process and Integration

Digital workflows were introduced in the 1990s and have provided groundbreaking benefits for organizations. A workflow is a sequence of tasks that processes data through a specific path from initiation to completion. For example, payroll and digital timecard workflows responsibly transferring employee hours data from point A to point B is a workflow. Modern-day applications make these workflows automatic, significantly reducing room for error and allowing data to synchronize between systems seamlessly and with instant access to reports, including:

- Job hours
- Job cost
- Actuals to budget
- Overtime
- Allotted time vs overtime
- Work-in-progress (WIP) reporting
- Customer billing
- Internal progress reporting
- External progress reporting

Workflow Steps

- STEP 1 Timecards inputted
- STEP 2 Timekeeping System
- STEP 3 Data Hub
- STEP 3 Instant Access to Reporting & Analytics

Modernizing Your Business Through Data Integration

Weekly project data can be extracted and secured, making your data available for immediate and future use. Best of all, the information can be formatted for easy readability and rapid error detection by payroll staff—resulting in payroll being as simple as a push of the button upon review.

Easy Integration
Integrate with any timekeeping system with ease.

Custom Reporting
Generate reports that comply with local labor laws.

Rapid Viewing
View reports through our web portal or export them as a PDF.

THE BOTTOM LINE:

Imagine the ability to conduct your entire payroll review in less than 10 minutes per project, resulting in an average savings of \$1,600 per project and an 80% reduction in reviewing and processing time. Better yet, picture bottom-line savings, or cost avoidance for low-valued manual data processing and resolving clerical errors, would be upwards of \$250,000 per year.
